

PREVALENCE OF TREATMENT OF NON-MUSCULOSKELETAL CASES IN A CHIROPRACTIC STUDENT CLINIC

Principal Investigator: Bruce Hodges, D.C.; Co-Investigator: Jerrilyn Cambron: D.C., MPH, Ph.D.

At one CAM institution, chiropractic students are educated and clinically trained to become primary care chiropractic physicians. Traditionally chiropractors are considered doctors that treat back and extremity conditions, therefore, the purpose of this chart review study is to quantify the number of non-musculoskeletal conditions and musculoskeletal conditions encountered at the institution's student clinic (H-1111).
