

INTERN EXPERIENCES WITHIN A CLINICAL TRIAL

Principal Investigator: Jerrilyn Cambron, D.C., Ph.D.

There are few studies looking at research training during medical residencies, none regarding CAM internships or residencies. At an ongoing clinical trial, DC and ND interns are involved in research patient baseline and treatment visits. We would like to survey the interns involved in the research project to determine if this experience is seen as beneficial to the interns and pros or cons experienced during their involvement. Results of the survey may lead to logistical modification of the clinical trial in order to better involve the interns.

Funding: Internal
