

**POST-GRADUATE CLINICAL RESIDENCIES IN CHIROPRACTIC MEDICINE: A  
PHENOMENOLOGICAL STUDY OF RESIDENCY GRADUATES**

Principal Investigator: Christopher Arick, D.C., M.S..

This qualitative research study will utilize phenomenological methodology to collect experiences and opinions of graduates of chiropractic medicine post-graduate clinical residencies in regards to curriculum content, clinical competency, and skills assessment. It is expected, through this research study, a deeper understanding of the graduate's experience of the post-graduate clinical residency in regards to curriculum content with several attributed themes, will be obtained and several recommendations for the developments of future clinical residencies will be created.(H-1902)
