

QUALITY ASSESSMENT OF CASE REPORTS ON A TECHNIQUE WEBSITE

Principal Investigator: Dana Madigan, D.C., MPH

Many technique specific websites publish case reports that are not available in journals, limiting the audience that accesses this literature. In addition, these publications have less strict author instructions and do not undergo a peer review process which may reduce the quality of these case reports compared to peer-reviewed published literature. This study aims to assess the quality of case reports published on a technique website and identify potential recommendations for quality improvement.
