INTERPROFESSIONAL EDUCATION IN A CADAVER LAB: A PEER-LED EXPERIENCE FOR ALLIED HEALTH STUDENTS FACILITATED BY CHIROPRACTIC STUDENTS

Principal Investigator: Melodie Hammer D.C., Ph.D.
Co-Investigator: Jocelyn Faydenko, N.D, D.C.

Since 2021, National University of Health Sciences Florida has offered cadaver workshops to various St. Petersburg College Allied Health programs upon request. NUHS students who volunteer for these workshops earn co-curricular learning credit. The purpose of this post-workshop survey is to evaluate the success of the cadaver lab workshop and, if chiropractic student teaching assistants improve the learning experience. Data from this survey will be used as part of an educational research project investigating the effectiveness of the workshops to enhance both clinical competence and mutual respect among future healthcare professionals.
